Personal Statement

A Personal Statement is a piece of writing that Applicants need to submit as part of their application. It is a statement of academic interests and should not contain any autobiographical information about their personal life. Completion of this section is mandatory for all applicants.

I have a deep interest in fields merging Computer Science and Medical/Health Care, such as Neuroinformatics specifically in future technologies such as Brain-Computer Interface (BCI), etc. My FYP was based on medical research and machine learning primarily focusing on the diagnosis of diseases and their severity using simple binary questions easily understood by the common man, which was later selected in Ignite[1]. Similarly, a parental background belonging to the medical field remained a driving force behind my motivation.

However, I could not reflect my interest and could not find a suitable platform to practice my true potential. Actually, I did not have any interest in computer science. Similarly, when I started to take interest, the education system was switched to online mode due to COVID-19. Furthermore, my mother's knee replacement surgery, and my kidney stones during my finals as well as financial issues erupted after closure of hospitals which remained pinnacle to my academic performance. Yet, in the last year, I developed my interest in the Medical Field because I realized the importance of health-related issues and I took on a challenge to cope with my combination of computer and medical background.

Having developed my deep interest in Bioinformatics, I did my FYP named as: 'Emergency Expert', and I strongly realized to pursue my Masters in Computer Science for further research on future developments in Health Sectors. LUMS offers interdepartmental studies ranging from a broad spectrum of specialized subjects taught by world-renowned and exceptionally distinguished Professors. Especially, Dr. Muhammad Tariq's investigations in Molecular Biology, Dr. Hamad Alizai with his research in IoT, Dr. Qazi's contributions to Distributed computing, Dr. Murtaza Taj's endeavors in Computer Vision, Dr. Muhammad Fareed Zaffar's expertise in security cover my entire interest set.

Further, after my Masters, I plan to have a PhD in areas intersecting (1) Computer Science, (2) Medical Sector (3) Systems and Security. To achieve this objective, LUMS research-oriented teaching can help me explore cutting-edge research areas so that I can narrow down my interests for further study. Therefore, my admission to LUMS will be a turning point in my career.
