CS5340 Databases – Fall 2025 (Quiz # 0)

Name: _____

Roll No: _____

Instructions

- 1- Read the Questions carefully to give concise Answers.
- 2- Answers outside the box will not be considered. Answers should be readable
- 3- Clearly mention any assumptions you have taken in your Answers.
- 4- Use of unfair means will result in an award of ZERO marks.

Q1. Which encryption method uses a pair of keys?

- | | |
|---------------|----------------------|
| A. Symmetric | B. Asymmetric |
| C. Randomized | D. One-time password |

Explain your answer:

Q2. In asymmetric encryption, if someone wants to send you a secure message, which key do they use to encrypt that message?

- | | |
|----------------------|--------------------|
| A. Their private key | B. Your public key |
| C. Your private key | D. Their password |

Explain your answer:

Q3. In education, databases are commonly used to store:

- | | |
|------------------------------------|-------------------------------------|
| A. Students' grades and attendance | B. Teacher's handwritten notes only |
| C. Printed exam answer sheets | D. Classroom blackboard content |

Explain your answer:

Q4. What is a database in simple terms?

- | | |
|---|---|
| A. A random list of files | B. A digital version of a well-organized cupboard |
| C. A locked cabinet with physical files | D. A machine for storing paper records |

Explain your answer:

Q5. If someone wants to send you a confidential message using asymmetric encryption, which key should they use to encrypt it?

- A. Their own public key
- B. Your public key
- C. Their own private key
- D. Your private key

Explain your answer:

Q6. Which encryption method uses a pair of keys (public and private)?

- A. Symmetric encryption
- B. Asymmetric encryption
- C. Hashing
- D. One-time pad

Explain your answer:

Q7. Microsoft SQL Server listens for incoming connections on a default TCP port. Which statement about this is correct?

- A. SQL Server uses port 80 because it follows HTTP-based communication.
- B. SQL Server uses port 1433, and clients must connect to this port unless explicitly reconfigured.
- C. SQL Server randomly assigns a new port each time the service starts.
- D. SQL Server listens on port 22 by default, just like SSH.

Explain your answer:

Q8. In SQL Server, which default port number is used for client applications to connect over TCP/IP?

- A. 80
- B. 1433
- C. 21
- D. 3306

Explain your answer:

Q9. According to the guidelines, what is the most important requirement to succeed in the course?

- A. Memorizing slides
- B. Concentrating on learning
- C. Scoring high on exams
- D. Submitting assignments early

Explain your answer:

Q10. Google Drive allows you to save files and access them anywhere in the world.

According to the slides, this is an example of:

- A. Database Management System
- B. Flat File Storage
- C. Relational Algebra
- D. Manual Data Entry

Explain your answer:

Q11. Ali orders food through an online app. His order immediately shows up in the restaurant's kitchen system and also updates on his delivery app. Which database feature makes this possible

- A. Batch processing
- B. Real-time sharing
- C. Data encryption
- D. Data redundancy

Explain your answer:

Q12. During the 2010s, the surge of social media, IoT, and smartphones primarily led to which development in database systems?

- A. Emergence of hierarchical databases
- B. Increased use of NoSQL systems for semi/unstructured data
- C. Decline of relational databases in banking
- D. Replacement of SQL by flat files

Explain your answer:

Q13. What is the primary database system that CS340 will focus on?

- A. Oracle Database
- B. MySQL
- C. Microsoft SQL Server
- D. PostgreSQL

Explain your answer:

Q14. When exams were conducted across 10 schools in 1960 and stored as paper records, which of the following was NOT listed as a major issue?

- A. Duplication of data
- B. Very difficult to share results
- C. Lack of standardized format
- D. Instant real-time collaboration

Explain your answer:

Q15. What was the main limitation of flat files?

- A. They required internet access
- B. No relationships and manual updates across files
- C. They only supported multimedia data
- D. They used too much encryption

Explain your answer:

Q16. When multiple doctors in different hospitals access the same patient record instantly, this is an example of:

- A. Data Redundancy
- B. Centralized Access
- C. Data Loss
- D. Manual Sharing

Explain your answer:

Q17. Which benefit of databases ensures unauthorized people cannot access sensitive information?

- A. Paper filing
- B. Duplication
- C. Security controls and encryption
- D. Flat files

Explain your answer:

Q18. NoSQL databases such as MongoDB and Cassandra became popular in the 2010s mainly due to:

- A. Faster adoption of SQL-based queries
- B. Increasing volume of structured employee payroll data
- C. Growth of unstructured data from social media and IoT devices
- D. Inability of relational databases to support transactions

Explain your answer:

Q19. A database is primarily designed for:

- A. Random file storage
- B. Efficient storage, retrieval, and management of information
- C. Paper-based indexing
- D. Only storing images and videos

Explain your answer:

Q20. According to the course outline, what percentage of the final grade comes from weekly quizzes?

- A. 0.4
- B. 0.5
- C. 0.6
- D. 0.7

Explain your answer:
